

About Us

GLOBE is a worldwide, hands-on, primary and secondary school-based Earth science and education program. For students, GLOBE provides the opportunity to learn by taking scientifically valid environmental measurements, reporting their results, and then using their data, and data from other schools, to collaborate with scientists and students worldwide. Over 32,000 GLOBE-trained teachers in more than 17,000 schools around the world are helping students explore and understand their local, regional, and global environment through scientific investigation. These numbers will continue to grow as the program expands.

GLOBE is a cooperative effort of schools and scientists, managed by the University Corporation for Atmospheric Research (UCAR) in partnership with Colorado State University (CSU) and supported by the National Aeronautics and Space Administration (NASA), the National Science Foundation (NSF), and the U.S. Department of State. The program in the U.S. is organized in partnership with colleges and universities, state and local school systems, and non-government organizations. Internationally, GLOBE is a partnership between the U.S. and over 100 other countries.
